

# THE LANCET Planetary Health

## Supplementary appendix

This appendix formed part of the original submission and has been peer reviewed. We post it as supplied by the authors.

Supplement to: Thompson J, Stevenson M, Wijnands JS, et al. A global analysis of urban design types and road transport injury: an image processing study. *Lancet Planet Health* 2020; **3**: e32–42.

## Appendix A

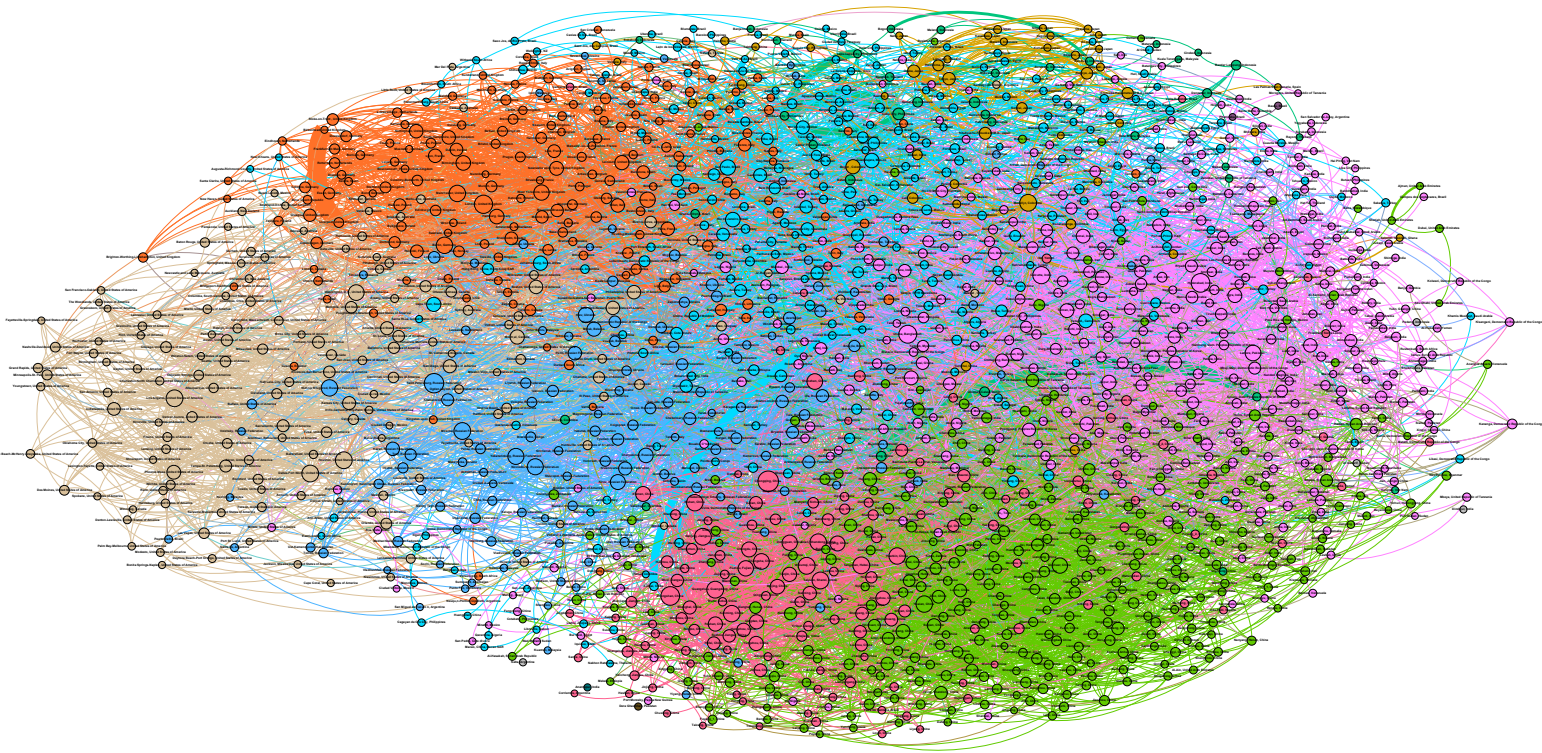

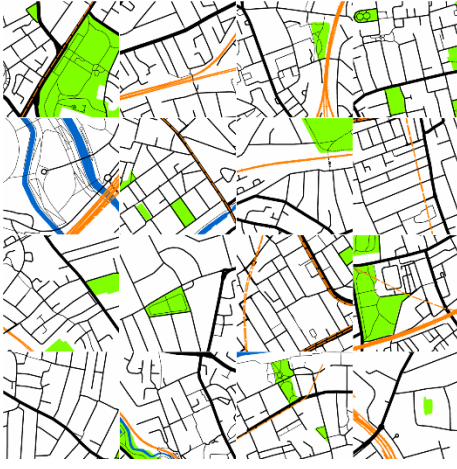

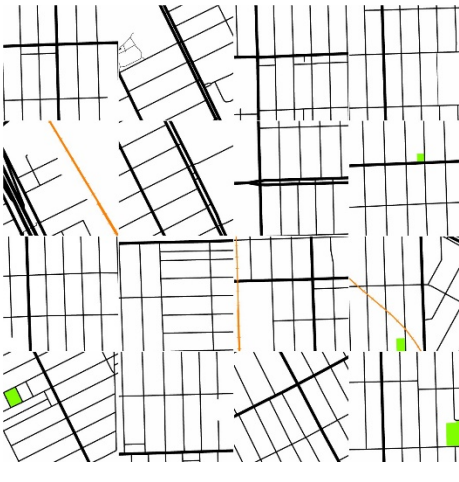

Figure 1. Network chart containing all cities under analysis.

<b>Table 1.</b> Geographic location, example cities, and population estimates from each of the 9 global city design types		
<b>City Type and Title</b> (n=Cities in Design Type)	<b>Geographic Distribution</b>	<b>Example map images</b>
<p><b>Type 1. Informal (INF)</b></p> <p>Sparse, low capacity informal road infrastructure, low railed transport, low formal green space (n=365)</p> <p><b><u>Estimated Total Population</u></b> 540,176,136</p> <p><b><u>City examples</u></b> Mumbai, India (pictured) Asuncion, Paraguay Aswan, Egypt</p>	<p><b><u>Geographic Distribution</u></b></p> <p>Many cities within the Informal (INF) cluster were located within Western China and rural India but were also prevalent throughout South America, the Middle East and the Arabian Peninsula. These cities contained highly irregular, informal road networks, however also contained large areas of white spaces indicating informal or unmapped urban configuration. The Informal city design type accounted for the largest proportion of sampled cities and the largest total captured population.</p>	

<p><b>Type 2. Irregular (IRR)</b></p> <p>High green space, mixed formal and informal low and high capacity road networks, low mass transit (n=311)</p> <p><b><u>Estimated Total Population</u></b> 220,047,518</p> <p><b><u>City examples</u></b> Beijing, China (pictured) Ilorin, Nigeria Jalna, India</p>	<p><b><u>Geographic Distribution</u></b></p> <p>Irregular cities were primarily located in Eastern China, making up around half of the cities in China. Irregular cities contained a high level of designated green space and irregularly shaped, rectangular blocks of varying sizes with a street network characterised by complex networks of small, non-through roads, and loops, and interspersed with large, wide highways. On average, irregular cities showed the lowest number of blocks per map image, at just under 6.</p>	
<p><b>Type 3. Large Block (LBL)</b></p> <p>Medium density formal low and high capacity road networks, medium railed transport (n=146)</p> <p><b><u>Estimated Total Population</u></b> 136,915,071</p> <p><b><u>City examples</u></b> Moscow, Russia (pictured) Bucharest, Romania Minsk, Belarus</p>	<p><b><u>Geographic Distribution</u></b></p> <p>Large Block (LBL) cities were primarily located in Russia, alongside former Eastern European and former Soviet Bloc countries such as Ukraine, Romania and Belarus. Some LBL cities were also found on the North American continent, China and South East Asia, though these were a small proportion of these countries' total cities. LBL cities averages around 10 blocks per map image.</p>	

<p><b>Type 4. Cul de sac (CUL)</b></p> <p>Very high density, low capacity mixed formal and informal road networks, low mass transit. (n=26)</p> <p><b><u>Estimated Total Population</u></b> 50,858,864</p> <p><b><u>City examples</u></b> Jakarta, Indonesia (pictured) Lapu-Lapu City, Philippines Nonthaburi, Thailand</p>	<p><b><u>Geographic Distribution</u></b></p> <p>Cul de Sac cities were typified by the presence of dense, tight road networks resembling cul-de-sacs or small alleyways. While many Type 4 cities were in India, they were most typical of cities in countries such as Indonesia, Vietnam, Philippines and Thailand where motorcycles able to navigate such small roadways are popular. Type 4 cities were often located in valleys or surrounded by mountain ranges and had low levels of mass transit. Despite their small road networks, complete blocks surrounded by 4 side streets were not overly common, averaging just over 10 per map image.</p>	
<p><b>Type 5. High Transit (HTR)</b></p> <p><b>Medium density, high capacity, formal road networks, high public transport</b> (n=163 or 9.8%)</p> <p><b><u>Estimated Total Population</u></b> 181,096,313</p> <p><b><u>City examples</u></b> Paris, France (pictured) London, United Kingdom Amsterdam, Netherlands</p>	<p><b><u>Geographic Distribution</u></b></p> <p>High Transit (HTR) cities were primary located in Western Europe however, some Type 5 cities were also found in North America, South East Asia and Australasia in locations where European colonies were also established. Design type 5 cities showed the greatest levels of railed mass transit networks. HTR cities averaged just over 13 blocks per map image, indicating a more intense network structure that most other city types.</p>	

<p><b>Type 6. Motor Cities (MOT)</b></p> <p>Medium to low density, high capacity, grid-based, road networks, medium railed transport (n=158)</p> <p><b><u>Estimated Total Population</u></b> 240,350,903</p> <p><b><u>City examples</u></b> Detroit, USA (pictured) Melbourne, Australia Toronto, Canada</p>	<p><b><u>Geographic Distribution</u></b></p> <p>MOT cities were consistently organised, grid-based networks present throughout North America and Australia and exemplified the ‘Manhattan grid’ or ‘motor city’. They were also punctuated by the 2<sup>nd</sup> highest levels of levels of railed, mass transit networks. Although formal and regular in a manner not dissimilar to CHQ cities, MOT cities were comprised of larger, rectangular blocks and lacked the presence of plazas that created additional triangular road networks in the street pattern. MOT cities averaged just over 10 blocks per map image, which was mid-range for all cities.</p>	
<p><b>Type 7. Chequerboard (CHQ)</b></p> <p>High density, medium capacity mixed formal and informal road networks, medium public transport (n=257)</p> <p><b><u>Estimated Total Population</u></b> 390,232,514</p> <p><b><u>City examples</u></b> Mexico City, Mexico (pictured) Rome, Italy Sao Paulo, Brazil</p>	<p><b><u>Geographic Distribution</u></b></p> <p>CHQ cities demonstrated a mix of formal, regular, square-grid-based networks and smaller, tight, informal and disconnected roads typical of cities developed in line with the ‘Laws of the Indies’<sup>1</sup>. Triangular shapes and angled intersections associated with central plazas appeared frequently. CHQ cities extended from the Mediterranean Sea from Italy through Spain, Portugal and across the Atlantic Ocean into Latin America. CHQ cities contained the third highest number of blocks per image at 11.3.</p>	

<p><b>Design 8. Intense (INT)</b></p> <p><b>Very high density, mixed formal high capacity and informal road networks, high public transport</b> (n=22)</p> <p><b><u>Estimated Total Population</u></b> 120,612,196</p> <p><b><u>City examples</u></b> Osaka, Japan (pictured) Tokyo, Japan Manizales, Colombia</p>	<p><b><u>Geographic Distribution</u></b></p> <p>INT cities were primarily typical of Columbian, Japanese and other high-density Asian island cities such as Singapore. They featured very high density small, irregularly shaped networks overlaid with a larger, high capacity freeways network. Railed public transport networks were also frequently observed, ranking second among city types behind HTR cities. Intense cities averaged just under 16 individual blocks per map image, the highest of all city types.</p>	
<p><b>Design 9. Sparse (SPR)</b></p> <p><b>Low capacity, low density formal and informal road networks, low public transport</b> (n=142)</p> <p><b><u>Estimated Total Population</u></b> 317,488,455</p> <p><b><u>City examples</u></b> Guiyang, China (pictured) Volta Redonda, Brazil Wuhan, China</p>	<p><b><u>Geographic Distribution</u></b></p> <p>Sparse cities were often exclusively located in Western China with a small number in South America and Africa. Cities in this group contained a mix of what appear to be planned but irregularly-shaped blocks, alongside curved and sparse roads containing loops and cul-de-sacs, potentially working around topological features. Sparse cities showed the lowest level of space dedicated to mass transit. Sparse city types showed an average of just over 6 blocks per map image, the second lowest of all identified types.</p>	

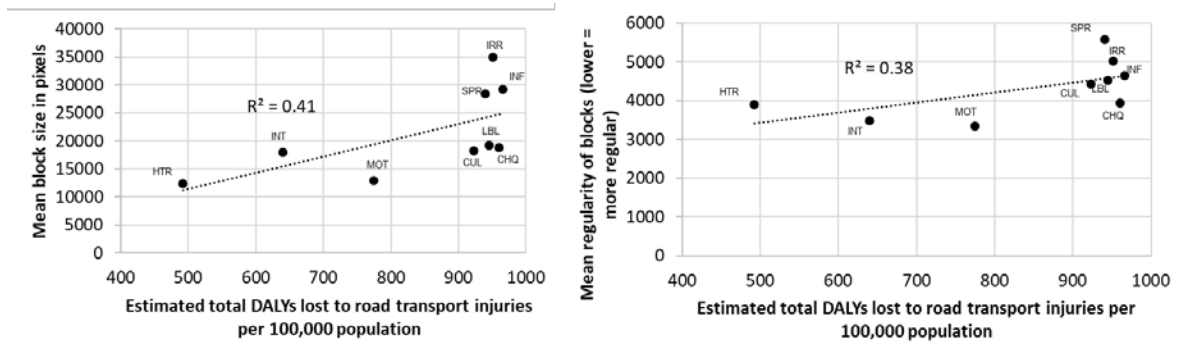

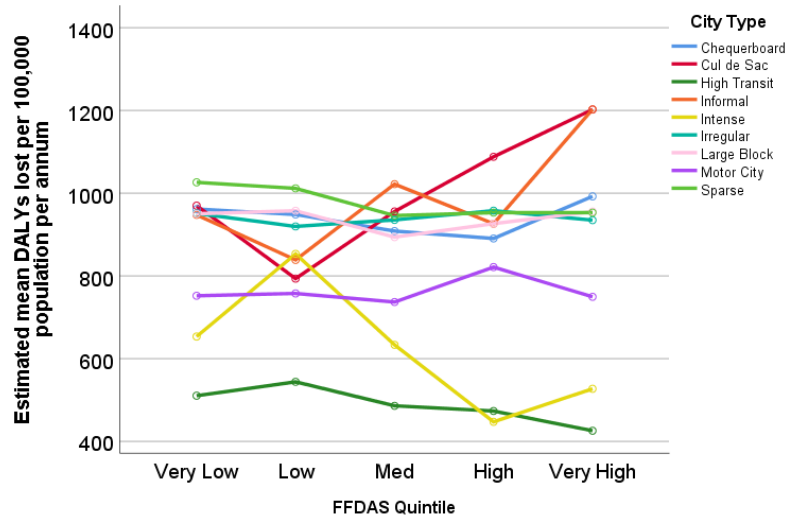

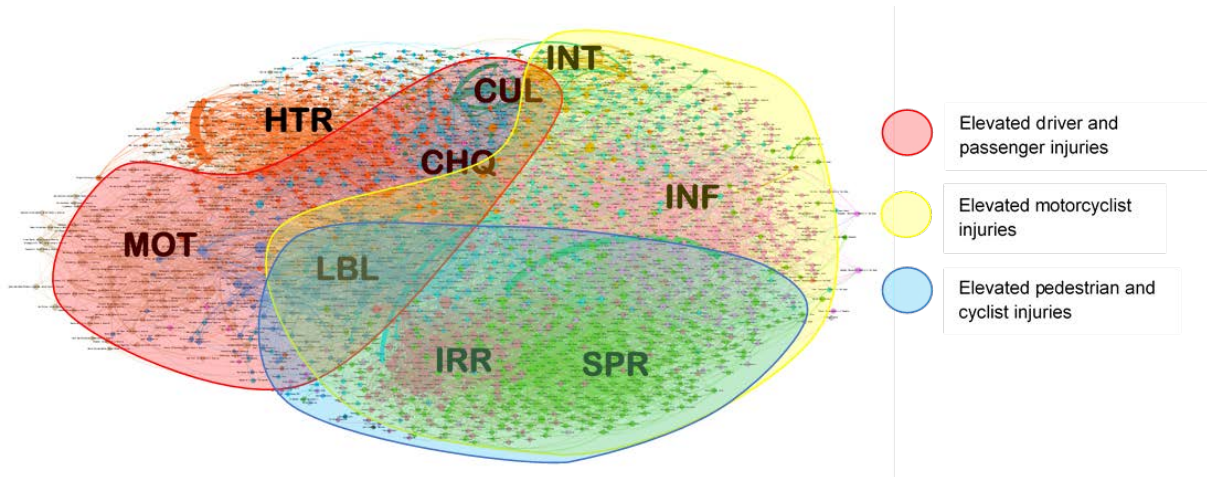

Figure 2. Average block size and regularity of blocks within each city type and estimated DALYs lost to road transport injuries.

**Table 2.** Representative cities and sample map images by city type.

<b>CITY TYPE</b>	<b>NAME OF CITY TYPE</b>	<b>REPRESENTATIVE CITY</b>	<b>SAMPLE MAP IMAGES</b>
1	Informal (INF)	Hyderabad, India	
2	Irregular (IRR)	Beijing, China	
3	Large block (LBL)	Saint Petersburg, Russia	
4	Cul de sac (CUL)	Jakarta, Indonesia	
5	High transit (HTR)	Paris, France	
6	Motor city (MOT)	Los Angeles, USA	
7	Chequerboard (CHQ)	Mexico City, Mexico	
8	Intense (INT)	Osaka, Japan	
9	Sparse (SPR)	Dar Es Salaam, Tanzania	

**Figure 3.** Estimated Disability Adjusted Life Years (DALYs) lost to road transport injury associated with City Type and FFDAS quintiles.

**Figure 4.** Network graph of city types, with an indicative overlay of areas of elevated risk of road user group injury among city types.

Table 3. Cities, Countries and City Types

Number	City Name	Country	City Type
1	Aba	Nigeria	Informal
2	Abeokuta	Nigeria	Informal
3	Abuja	Nigeria	Informal
4	Accra	Ghana	Informal
5	Ad-Dammam	Saudi Arabia	Informal
